Abstract of JP6123158

PURPOSE: To manufacture a lightweight, high-strength composite material for construction while easily achieving the strength that could meet design requirements.

CONSTITUTION: A composite material for construction comprises a plateshaped core 1, a fiber sheet 2... stuck to at least one side of the core 1, and resin used for gluing the core 1 and the fiber sheet 2... together and with which the fiber sheet 2... is impregnated. Even if a lightweight, low-strength member is used as the core 1, high strength can be added by the fiber sheet 2... against bending stress. Therefore, the composite

material is used as a lightweight, high-strength building material by using a lightweight core 1.
